Work Experience

CONTRACT - FRONTEND DEVELOPER (October 2024 - Present): LOCUMSPACE. Locumspace is a startup platform designed to streamline job placements for healthcare professionals, providing an efficient way for locums to find and manage job opportunities while enabling healthcare facilities to fill staffing gaps effectively. I've been actively involved in the following activities;

- Developed and optimized both the **user dashboard and admin dashboard**, improving accessibility and usability for all stakeholders.

- Implemented **authentication and role-based access control**, ensuring secure and seamless access for users and administrators.

- Designed and integrated **admin permissions and user management features**, allowing efficient control over platform access.

- Developed **interactive user metrics and analytics dashboards**, enabling admins to monitor platform activity and engagement.

- Integrated **tracking and analytics** to improve SEO and platform performance monitoring.

- Collaborated with designers to create a **responsive and visually intuitive interface** across multiple devices.

·• Worked closely with Backend engineers to integrate **API**s for **job listings, authentication, verification, and data management**.

- Optimized **state management and real-time UI updates**, enhancing performance and user experience.

·• Identified and resolved **key bugs and performance bottlenecks**, ensuring a stable and scalable application.

INTERN - FRONTEND ENGINEER (February 2024 - July 2024): PRODUCT SQUARE TECH. During this internship programme, I've had the opportunity to develop my skills and apply them to solving real life problems. One project we worked on here is FOODIT which is a ***white label web app for food vendors***. I've been actively involved in the following activities;

- writing clean and readable code

- Using the front end frame work REACT to create reusable components and apply styles using tailwind css and some custom styles as well.

- Making use of Industry best practices, optimizing code performance and making the layout of projects responsive to all and every device.

- Collaborating with Product Managers, Product Designers and Backend Engineers to ensure optimal delivery on projects and to maintain very effective communication in the team to meet all the project/product requirements.

- Working with timelines and ensuring each target is met on or before the deadline.

- Team lead for frontend Engineers, and as such I provide daily updates on team tasks every morning during sprint meetings and i give reports of challenges or concerns which may exist.

- Conducting and participating in code reviews, to ensure the team maintains a high quality of code through out the project and to share ideas within ourselves in the team.

- Using Git and GitHub, to perform collaborative work and responsible for resolving code conflicts with the main branch and merging code into the main branch from the various branches of team members after finishing a task and pushing to their branch.

SKYPATH (MARCH 2024): (PERSONAL FREELANCING BRAND). Started this freelancing brand, which is aimed in a particular niche for small businesses and whatsapp vendors. To provide an online presence for brands and to provide digital solutions as well to already existing small startups.

FRONTEND WEB DEVELOPER (September 2023 - December 2023): RENTBETAHOUSE NIG. LTD. A property Tech Firm, In this organization we used wordpress to customize and build the website and features as required by the company. Held and conducted meetings to discuss about pros and cons of what we can work with using wordpress.

INDUSTRIAL TRAINING (June 2019 - December 2019): GEOCONSULT SURVEYING FIRM. In this organization we carried out survey on landed properties, which may or may not be developed. Created a survey plan for the property using tools like AUTOCAD. Measurements and bearings were taken using DGPS, which has a high accuracy.

Personal Projects

PORTFOLIO WEBSITE

https://arinze-dev-portfolio.vercel.app/

NB: All the projects below can also be found on my portfolio website above.

COINKEEP

Coinkeep is a demo project, built around Web3 using JavaScript with React and Tailwind css. Users can view the price data from a diverse range of cryptocurrencies and read news articles pertaining to crypto as well as see their live price and trend in real time. Users can also sign up (or sign in with Google only on PC). Using ethers.JS users can also connect their metamask wallet (pc only) to view the address and also see their available balance.
